Coupons are

Rebates are

Coupons and rebates are offered by various stores and businesses to give customers discounts on what they sell. Coupons can be used at the time of the sale. Rebates are given to customers after the sale. A formula to calculate the final price is shown below:

Final Price = Total Selling Price - Total Savings

Bertha Jones purchased a half gallon of ice cream for $5.04. She had a store coupon for $0.80. What was the final price of the ice cream? Express your answer as a dollar amount to the nearest cent.
