

Equation for a circle

Equation

$x^2 + (y + 2)^2 = 4$

$(x - 3)^2 + (y + 4)^2 = 9$

$$(x-2)^2 + (y-3)^2 = 16$$

$$y^2 - 6y = -9 + 6x - x^2$$

$$4x + 16 - 8y = -x^2 - y^2$$

$$7 = -4x - 4y - y^2 - x^2$$
